

03. MEDITATION 2 : THE ENERGY CENTRES

DURATION : 04:06

STUDY SHEET

COURSE SUMMARY

This video introduces you to meditation, focusing on the body's energy centres. You will learn about the relationships between the eye and the pineal gland, and the importance of breathing, diet, and sleep for maintaining your health. Through a guided exercise, you will integrate meditation techniques to connect with your body at different levels – mineral, plant, and animal. This process will help you find points of stillness and balance while strengthening your body awareness, which is essential for calming a restless mind and revitalising your vital energy.

MEDITATION AND ENERGY CENTRES

The eye is considered an **externalised brain**. It represents an **expansion** of our **third ventricle** and is connected to a small gland called the **pineal gland**. Although the pituitary gland is often thought of, it is the pineal gland that regulates one of the most essential energy qualities of our life: **sleep**.

To maintain good health, it is crucial to **breathe** well, **eat** well, but above all to **sleep** well. Often, we have difficulty sleeping because our mind is too agitated.

MEDITATION EXERCISE

1. **Starting position:** Stand with your feet parallel and legs slightly bent to open up the space.
2. **Alignment:** Perform a slight **pelvic retroversion** to bring the navel and pubis towards the **xiphoid process**.
3. **Balance:** Seek balance between your **anterior** and **posterior midline**. Close your eyes and make contact with the ground.
4. **Body awareness:** Feel gravity and the weight of your body on your feet. Become aware of your **urogenital system**, which is continuous down to the feet.
5. **Connection with the plant kingdom:** Feel your **digestive system** and relax. Each level of your body has a **point of stillness**. Seek this stillness in your tissues.

When you are well-rooted in your **mineral kingdom**, you can connect to your **plant kingdom**, which is linked to your emotions. By being relaxed and still, breathe deeply down to your feet.

6. **Animal kingdom:** Connect to your **rhythmic system**, especially your heart. Look for the point of stillness and the fulcrum, which is located at the level of the **posterior mesogastrium**.

7. **Concentration:** Concentrate on the point between your eyes while remaining relaxed.

When a master is asked how long one should remain in this meditation, they will reply: "As long as you can stay."

Finally, relax and move your hands slightly to bring in some **energy**. By slightly bending your knees, you can stimulate the circulation of energy in your body.
